

Envir 202B – Winter 2003 – F. Stahr & P. Rhines

Case study: **“The River Dammed: The Proposed Removal of the Lower Snake River Dams”**,
by Alan Paul Price, Univ. of Wisconsin , 2002

Preparation (there will be a really short quiz on this)

- 1) Please go to “The Dam Site” webpages (<http://homepages.tig.com.au/~richardw/page2.html>) and read through each of the Q&A sections (they’re quite short).
- 2) Read the attached description of the four dams in question from the webpage “Dams of the Columbia Basin & Their Effects on the Native Fishery” (<http://www.ccrh.org/comm/river/dams7.htm>) and check the map there to see where these are in the general drainage basin.
- 3) Read the attached EOS article “Dam Removal in the United States: Emerging Needs for Science and Policy”, by Martin W. Doyle et al, 28 January 2003.
