Acknowledgements: This case study was developed with support from The Pew Charitable Trusts. It is a revised version of a case originally presented at the Case Studies in Science Workshop held May 21-25, 2001 at the University at Buffalo, State University of New York. My co-presenters at the workshop were Dr. James N. Jensen, University at Buffalo, State University of New York, and Dr. Eleanor Snow, University of South Florida. I owe the original concept and organization of the case to both. It is an understatement to say that I greatly appreciate their contributions. I would also like to thank the students who contributed their time and their comments to the case studies workshop where we first ran the case. This includes the student who most emphatically stated, “Fish are boring!!!” I have tried to make them less so.
