Term Project

For the term project, you are going to develop a short lecture (with lecture notes to hand out) followed by a hands-on Matlab demonstration that will cover an aspect of data analysis. You could cover a topic that we will cover in class or a new topic that is of interest to you. I would strongly suggest that your exercise involve a practical application of the technique to data that interests you.

The total time allotted to the lecture and demonstration will be 30 minutes (we will schedule them in finals week) and I would suggest dividing the time about equally between the lecture and demonstration.

If you have not yet settled on a project please arrange a meeting with me.

I would like to get copies of your lecture notes and demonstrations.
